**Law Firm Dedicated to Bridging Law,
Technology, and Compliance in the MENA
Region**

About LexiTech

LexiTech is distinguished by being more than just a traditional law firm; it is an integrated service ecosystem operating through four strategic pillars. LexiTech Core represents our legal arm, specialized in providing essential legal solutions and litigation representation, in addition to digital services such as drafting smart contracts and policy automation.

Acknowledging the intersection of law and technology, we established our tech arm, which focuses on cybersecurity support, digital forensics, and incident management.

This model is completed by our training arm, Law in Motion, dedicated to capacity building and empowering internal teams through intensive executive programs and specialized governance clinics, ensuring our clients comprehensive legal protection and sustainable professional development.

Core Pillars

01

Legal Services

We advise on corporate, commercial, privacy, and regulatory matters, structuring pragmatic strategies that balance risk, cost, and speed. Our counsel spans contracting, disputes prevention, compliance frameworks, and governance design tailored to operational realities.

02

Technology Enablement

We implement digital tooling that makes legal processes measurable and repeatable. From smart contract templates to automated policies and audit workflows, our stack improves accuracy, accountability, and collaboration across legal, IT, finance, and operations.

03

Training Programs

We deliver practical learning pathways for counsel, business leaders, and technical teams.

Courses focus on privacy, cybersecurity, AI governance, and operational compliance, emphasizing scenarios, templates, and team-wide readiness.

04

Research Lab

Our Legal Innovation Lab studies emerging regulations and technologies, prototypes service models, and runs pilots with clients. Research outputs become actionable playbooks, accelerating adoption while reducing implementation risk.

Compliance Reports

Our State of Compliance Reports transform regulatory complexity into a clear, prioritized plan.

Each report maps obligations to business processes, defines ownership, highlights gaps, and proposes practical remediation steps with timelines.

We write in accessible language, include visual maturity snapshots, and quantify risk impact to support confident decision-making.

Roadmaps specify quick wins, sequence long-term initiatives, and align with budget and resourcing realities. Clients use the report as a living guide, tracking progress against milestones and updating controls as regulations evolve.

The result is transparency, shared accountability, and measurable improvement across teams.

Cyber Support

We help organizations prevent, detect, and respond to Cyber incidents with clear roles, tested procedures, and legal-ready documentation. Our team designs incident playbooks, aligns responsibilities across legal and communications, and rehearses decision trees through tabletop exercises.

During an event, we coordinate counsel, forensics, notification analysis, regulator engagement, and contractual obligations. After resolution, we drive remediation, evidence retention, and improvements to controls. This end-to-end approach reduces confusion, accelerates response, and protects brand and stakeholder trust.

Coordinated Response

Professional Training

Role-based learning paths turn policy into practice. Programs blend scenarios, templates, and exercises so teams build practical fluency and repeatable habits that improve compliance, security, and decision-making
